QUESTION: 1

A collaboration sends purchase order data to application x through a synchronous service call (S1). Before the PO data goes to application X. It must go to application Y through an asynchronous outbound service call (S2) to verify the customer's credit rating. The credit rating verification process can be instantaneous or take up to 48 hours, but should never take more than 48 hours. Which of the following solutions are appropriate to define how the service calls should be reconfigured? Select two.

- A. The service call (S2) should be changed to a synchronous service call with a timeout value set 48 hours.
- B. The service call (S2) should be changed to a synchronous service call. Configure a Web-based system monitor with a timeout value set 48 hours.
- C. The service call (S2) should be changed to a synchronous service call. A separate collaboration should be created to receive the response from application Y when the vendor is approved. Configure a Web-based system Monitor with a timeout value set 48 hours
- D. Configure an Asynchronous inbound service call in the collaboration after service call (S2) with a timeout value set to 48 hours and set the correlation set attributes.
- E. Configure an Asynchronous inbound service call in the collaboration after service call (S2) with a timeout value set to 48 hours and set the template property correlation to "keys".

Answer: A, B

QUESTION: 2

A very large object is being processed by an adapter. While processing the object, the adapter goes down and appears to hang. After checking the adapter's log it is discovered that an OutOfMemoryException occurred. The event can easily be resubmitted. What is the best way to correct the problem before resubmitting the event? Select two.

- A. Run the adapter as a service to minimize memory consumption, and set the logging and trace levels to 0 with location to a file so that excessive log and trace messages do not use excessive memory.
- B. Increase the memory available to the adapter by increasing the value of the CW_MEMORY_MAX parameter in the ADAPTER_MEMORY section of the configuration file for the adapter.
- C. Increase the memory available to the JVM in which the adapter is running by increasing the value of "jvmMaxHeapSize" connector property.

D. Increase the memory available to the JVM in which the adapter is running by increasing the value of the -Xmx argument the adapter's bat or sh file

Answer: A, B

QUESTION: 3

A deployment professional at a SMB customer location is installing WebSphere Business integration Server Express. The client has a limited usage for WebSphere MQ WebSphere MQ. WebSphere Application Server, Express and DB2 Express. Aside from the installation of Business Object Designer Express. Map Designer Express, Connector Configuration Express. Relationship Designer Express; which of the following options are valid for this specific client?

A. Installation of Process Designer Express, Test Connector, Integration Workbench Modeler Entry Edition, System Manager, Flow manager, Log viewer, and Relationship manager.

B. Installation of Test Connector, system Manager, Flow manager, Log Viewer and Relationship Manager, and up to 3 of the offered and desired adapter.

C. Installation of process Designer Express, Test Connector, System Manager, Flow MANAGER, Log Viewer, Relationship Manager, and up to 5 of the offered adapters.

D. Installation of Test Connector, WBI Monitor Express system Manager, Flow MANAGER, Log Viewer and Relationship Manager

Answer: B

QUESTION: 4

Which of the following statements about the Business Object Designer is MOST accurate?

A. A business object definition can be created and deleted in the Business Object Designer without being connected to the WebSphere InterChange Server. One must be connected to the WebSphere InterChange Server when deploying the business object definition to the repository.

B. A business object definition can be created, edited, and deleted in the Business Object Designer without being connected to the WebSpher interchange SERVER. One must connect to the WebSphere interchange server to deploy the business object definition to the repository.

C. A business object definition can be recreated and edited in the Business Object Designer without being connected to the websphere interchange server. One must be connected to the websphere interchange server to save or delete a business object definition.

D. Business object designer must be connected to the websphere interchange server in order to create update or delete a business object definition.

Answer: B

QUESTION: 5

A collaboration is bound to a Server Access interface source application in the Form port and an SAP adapter in to the port. An access request is sent to the collaboration. However, the request fails in SAP due to an unknown application reason. What is the BEST option for resubmitting the failed event?

A. Use the source application to make the access request again.

B. Use the flow Manager to submit the failed event

C. Use the Failed Event Manager to submit the failed event

D. Use the interchange Server Component Management in the System Manager to submit the failed event

Answer: A

QUESTION: 6

On Event delivery of a business object, when is a map called to convert the Application Specific Business Object to the Generic Business Object?

A. In the adapter agent, after the message is retrieved from the source application and before the message is forwarded to adapter framework.

B. In the adapter framework, after the message is received from the adapter agent and before the messages is forwarded to the controller.

C. In the controller, after the message is retrieved from the messaging queue and before the message is published to subscribing collaborations.

D. In the Collaboration after the message is received from the controller and before the message is processed by the collaboration object.

Answer: C

QUESTION: 7

When running `repos_copy` from the command line, the following error is encountered, even though the websphere interchange server is on the same machine and is active:

```
##### cannot get rootcontext, the name service server may be not
```

```
running.org.omg.CORBA.ORBPackage.InvalidName:
```

```
NameService.org.omg.CORBA.TRANSIENT:java net connectException: Connection  
refused:connect:host=localhost,port=14500 vmcid: IBM minor code:E02 completed:No
```

Check the server name. The server might not be running. MQ.ORB and ICS are all configured as service and have been started. Which of the following actions will MOST quickly resolve this problem?

- A. Restart the Object Request Broker and then restart the websphere interchange server.
- B. Restart Websphere MQ and the object request broker.
- C. Reboot the machine and start the websphere interchange server.
- D. Change the IBM ORB port number. Start the IBM ORB and restart the websphere interchange server.

Answer: A
